

# Perforated Pallet Wrap

*Clingfoil*

COMPLETE PACKAGING SOLUTIONS

Part of the Samuel Grant Group

Perforated pallet wrap allows you to despatch products with complete confidence that humidity, condensation or temperature will not ruin your goods, by allowing them to breathe.

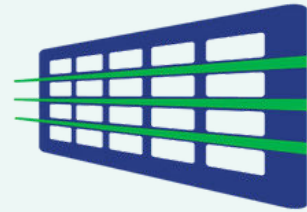

## Unrivalled Aeration

By allowing your products to breathe, any buildup of unwanted heat, gases, fumes, and moisture can be easily removed from your pallets without having to make drastic changes or suffer delays within your production and end-of-line packing processes.

## Superior Strength

High-strength reinforcement bars ensure that our perforated film can cope with the heaviest of pallet loads and the most stringent demands, while only requiring a minimal amount of material to secure the load.

## Key Benefits

### Temperature Control

Vastly improved control allows you to chill your products up to 50% quicker and maintain temperature

### Operational Efficiency

Speed up your end-of-line production process and eliminate lengthy waiting times

### Eliminate Condensation

Removes moisture build-up, which can damage your products, packaging and reputation

### Off-Gassing

Easy dispersal of fumes, chemicals, build-up of gases and production-related odors or vapours

### Pallet Stability

Keeps product packaging in pristine condition, ensuring ultimate stability of pallet loads

### Reduces Plastic Usage

Perforated pallet wrap can provide a reduction in plastic weight and requires minimal film to wrap
